

Discover These 4 Costly Common Mistakes Made When Upgrading Your PeopleSoft Applications

Since you are an IT executive, business executive or key user focused on PeopleSoft HCM or FSCM applications, you know that upgrades can be complicated, confusing and frustrating, right?.

You also know from experience, a well-defined project plan, proper execution of these steps below and completion of full user acceptance testing are key components to a successful go-live.

4 of the most common mistakes causing a huge negative impact on your upgrade are:

- Ignoring almost any error during setup of the DEMO database
- Insufficient testing duration and resources
- Not conducting the final test-move on production equipment
- Overlooking load testing

Bottom line... whether you are faced with a single or double upgrade, skilled experts to walk through upgrade options to more quickly help you make the right decisions and formulate a project plan to be delivered on-time and on-budget are one simple phone call away.
